THE MILTEX® LED LOUPES LIGHT AFFIXES EASILY TO YOUR

MILTEX® LOUPES!

ASSEMBLY IS EASY!

1. Pull off flip up paddle located on the locking knob.

2. Light will mount onto the loupes as the paddle does; simply push the grooved portion in between the locking knob.

3. Clip battery pack onto your belt.

4. Turn on and use!

CHOOSING THE RIGHT LOUPES

FOLLOW THESE 2 STEPS FOR A PERFECT MATCH.

STEP 1: CHOOSE YOUR MAGNIFICATION.

If you are a new loupes user, start with the lowest power you need. Most professionals begin using loupes with a magnification power of 2.5X. Remember, as the magnification increases, the field of view, focal range and light transmission decreases.

STEP 2: CHOOSE YOUR WORKING DISTANCE.

All loupes are pre-set to focus at a certain distance and objects will remain in focus within a range of several inches. Miltex® loupes are available in 4 working distances: Short (10-13"), Regular (12-16"), Long (14-18") and Extra Long (16-20").

The 250 Series (2.5X) is the ideal general purpose optic. The 250 series optic will provide a magnified view of approximately 2.5 times the object size. Most first time loupes users choose this magnification.

The 300 Series (3.0X) is an ideal optic for those who have worked with a 2.5x magnification power optic and want an increase in power. The 300 series optic provides a view of the entire area of focus and has an excellent depth of focus.

The 350 Series (3.5X) is the highest magnification optic available in a compound lens design. The 350 series optic is an excellent choice for dentists and surgeons requiring high magnification in a lightweight loupes.
